

Attorney's Docket No.: 07039-29800

DEC 2 0 2002

TECH CENTER 1600/2900

IN THE UNITED STATES PATENT AND TRADEMARK OFFICE

Applicant:

Stephen James Russell et al.

Art Unit

: 1632

Examiner: Shin-Lin Chen

Filed

Serial No.: 09/667,947 September 22, 2000

Title

: THERAPEUTIC METHODS AND COMPOSITIONS USING VIRUSES OF THE

RECOMBINANT PARAMYXOVIRIDAE FAMILY

U.S. Patent and Trademark Office

P.O. Box 2327

Arlington, VA 22202

RESPONSE

In response to the action mailed September 12, 2002, please amend the application as follows:

In the specification:

Please replace the paragraph at page 20, line 11 with the following amended paragraph:

-- The specific sequence of amino acids in the protease cleavage site depends on the catalytic mechanism of the protease, which is defined by the nature of the functional group at the protease's active site, as discussed above. For example, trypsin hydrolyzes peptide bonds whose carbonyl function is donated by either a lysine or an arginine residue, regardless of the length or amino acid sequence of the polypeptide chain. Factor Xa, however, recognizes the specific sequence Ile-Glu-Gly-Arg (SEQ ID NO:1), but hydrolyzes peptide bonds between Arg-Thr and Arg-Ile. Thus, a protease cleavage site comprises at least 2, 3, 4, 5, 6, 7, 8, 9, or 10 or more amino acids. Optionally, additional amino acids can be present at the N-terminus and/or Cterminus of the recognition site .--

Please replace the table at page 21, line 18 with the following amended table:

CERTIFICATE OF MAILING BY FIRST CLASS MAIL

12/19/2002 MBLANCO 00000008 09667947
